BAY SHORE

SYSTEMS INC.

14206 North Ohio Street
Rathdrum, ID 83858
USA

Bay Shore Systems is proud to introduce the

ADS Series

(A – Air D – Delivery S – System)

Most bullet teeth or conventional drilling tools are only rated to drill up to 12 ksi (82 MPa) material. The use of percussion allows rock to be drilled far beyond the bullet tooth limit. The ADS series of air swivels in conjunction with cluster or canister hammers increases productivity and reduces wear and tear to your drill rig when you need to get through tough rock. With drill depths up to 100' (30m)* you can install a rock socket wherever you need to and through just about anything. The ADS series attachment can be equipped to most LoDrills, new or existing**.

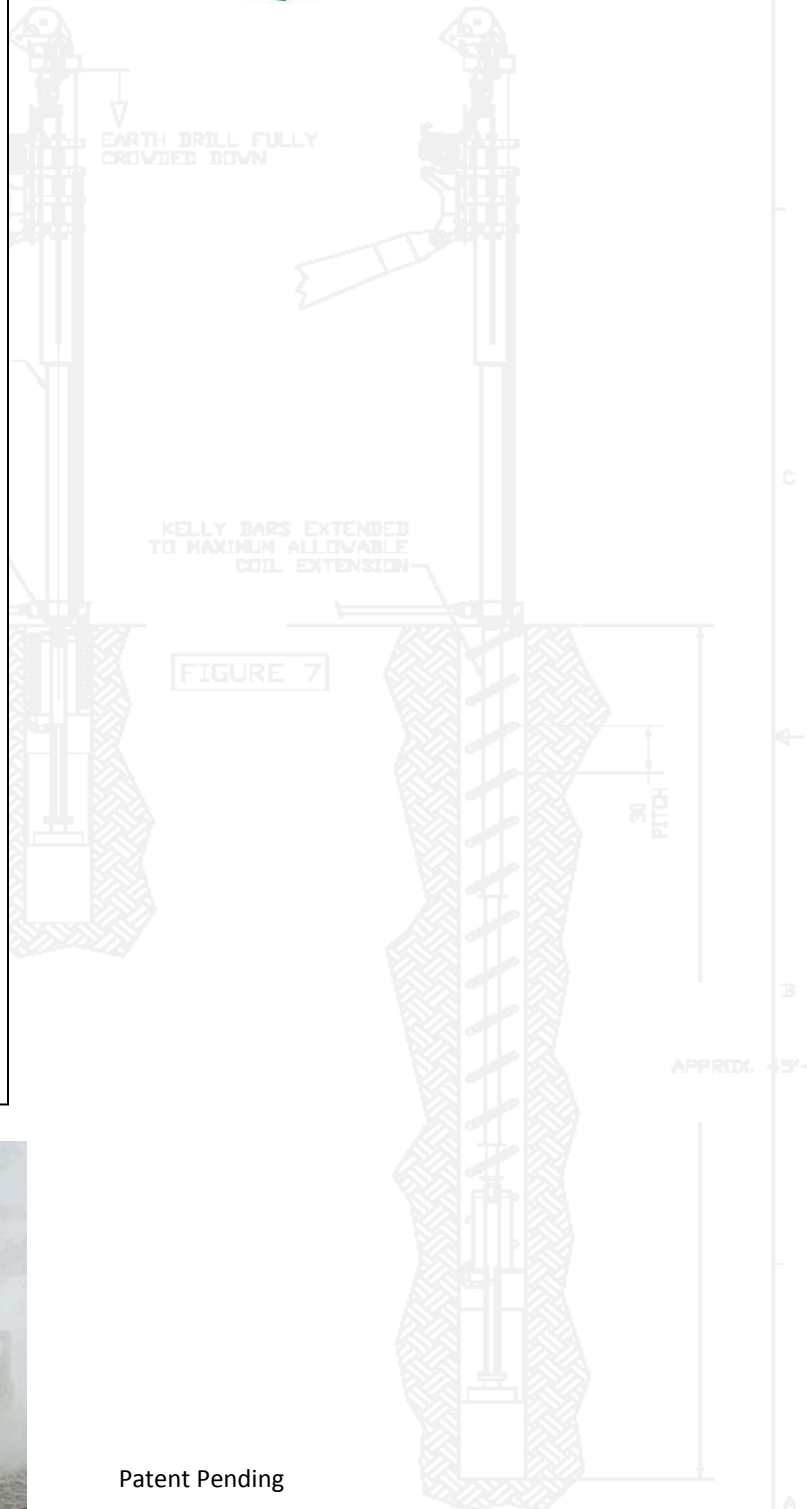

Diameter range: Ø24" (600 mm) – 60" (1500 mm)

Demonstration video and additional photos are available upon request. Contact your Bay Shore salesperson or distributor for more information.

888-569-3745

*Overall depth depends on kelly bar configuration

**Based on kelly winch capacity

Patent Pending
